RE: Conditional Approval of Abatement Plans, Notice of Violation N85-4-7-2, #1 of 2, Spring and Seep Survey, Crandall Canyon Mine, ACT/015/032, 4 & 7, Carbon County, Utah

On February 11, 1986, the Division sent a Conditional Approval to the Genwal Coal Company for abatement plans for NOV N85-4-4-2 #1 and 2. The condition attached to the approval required that Genwal analyze all ground water samples for the baseline list of parameters rather than the operational parameters as set forth by the DOGM Guidelines for Establishment of Surface and Ground Water Monitoring Programs. Genwal has incorporated this condition into the Mid-Term review permit but to date has not included this condition into the Tract 2 Permit Application.

Recommendation: Genwal should be sent a letter requesting that the ground water monitoring program outlined in the Mid-Term review permit should be copied and sent to the Division to be inserted into the Tract 2 Permit Application.
